Christchurch 8540

Attention: Adele Childs

RE: 104 Victoria Street - Additions to existing building and structural earthquake upgrade.

Adele

DHC Consulting was engaged to provide structural engineering design for the building additions and upgrade of the building bracing.

The structure was designed in accordance with current New Zealand Standards and Building Code.

The Structure bracing capacity was upgraded to meet current New Zealand earthquake load which means that the structure has more than 100% of NBS.

If you need to discuss or require any further clarification please feel free to contact me at any time.
